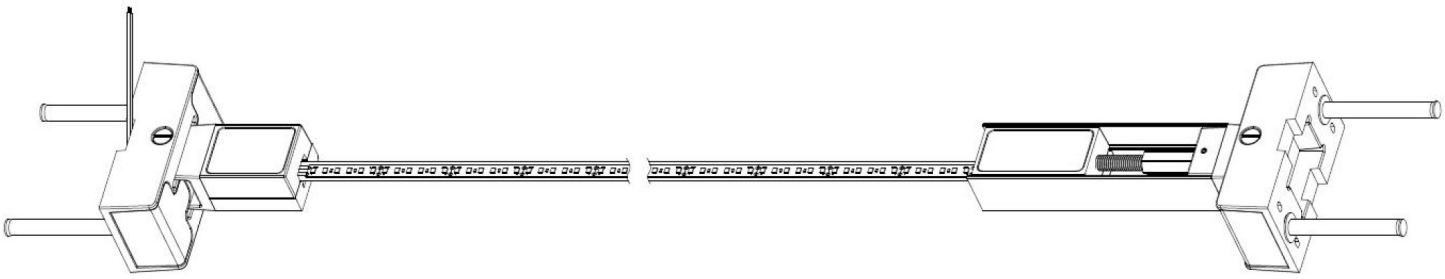
Soft Line

by Luz Negra



Soft Line es un nuevo concepto de luminaria lineal para iluminación indirecta de paredes y techos. Se compone de dos soportes que se fijan a paredes, techos o suelos y ambos están unidos por una fina pletina de acero donde fijaremos la tira de led que deseemos utilizar. La pletina de acero mide 30 metros y podemos cortarla ajustando así la medida de nuestra luminaria.

La pletina de acero permite aplicarle tiras de led de hasta 12mm de ancho. Recomendamos nuestro modelo ecoled Infinity directo a 230V ya que podemos colocar los 30 metros seguidos sin caída de tensión ni necesidad de fuente de alimentación. Otro modelo interesante de tira flexible sería el ecoled Castellón a 48W ya que permite hasta 30 metros sin caída de tensión alimentando solo, por un lado.

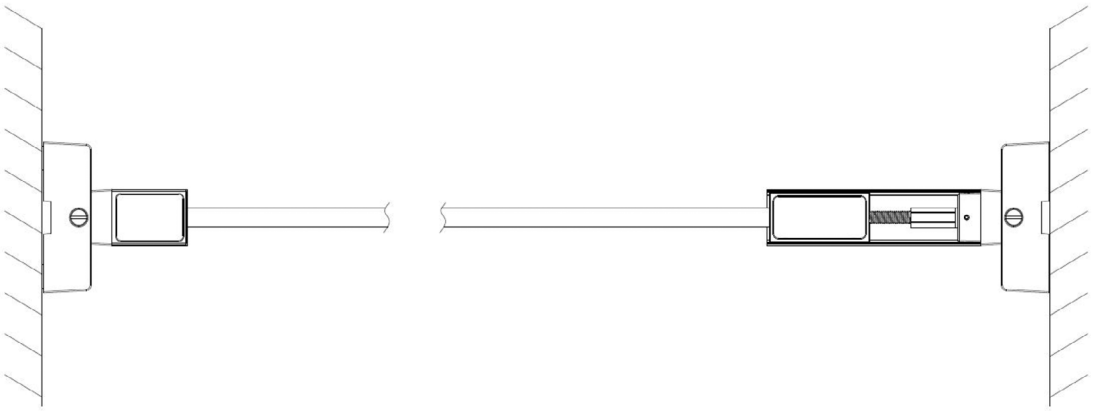
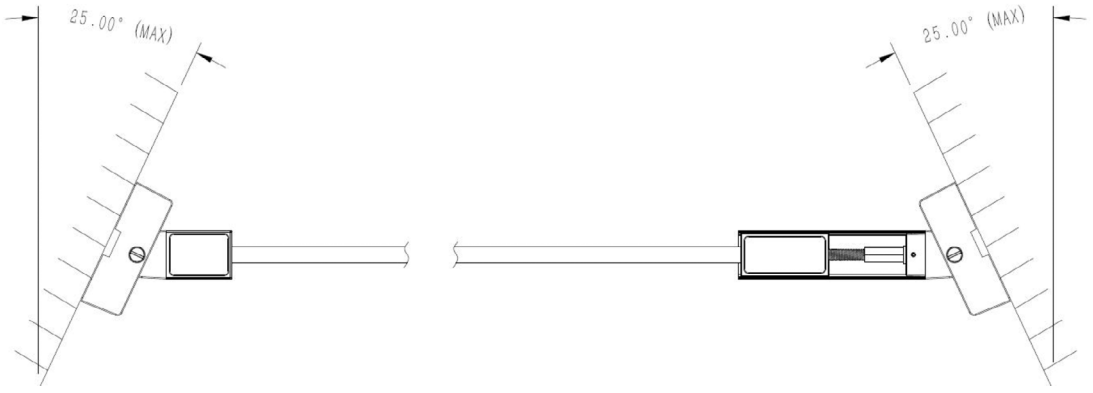
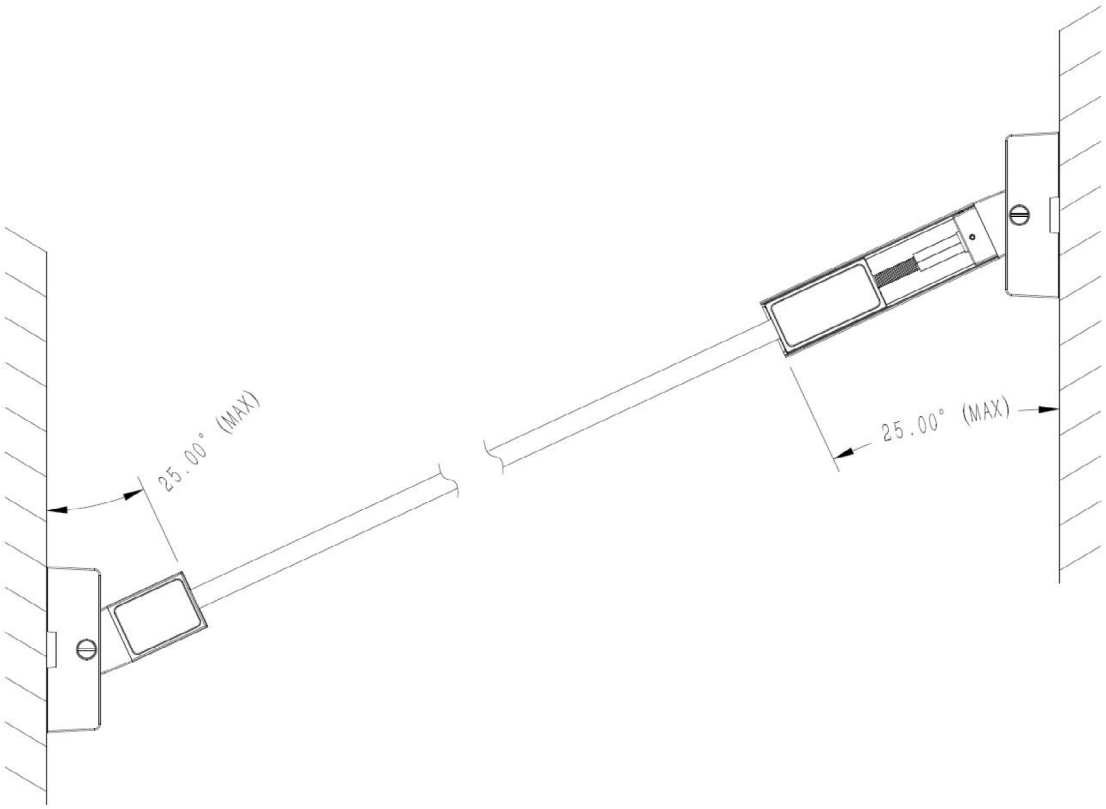
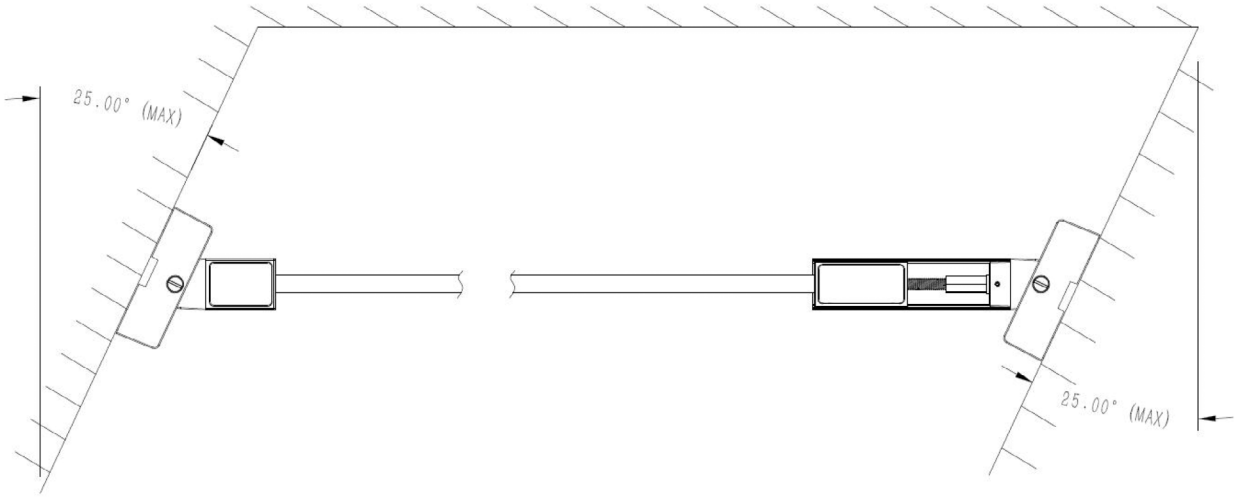
Formas posibles de instalación



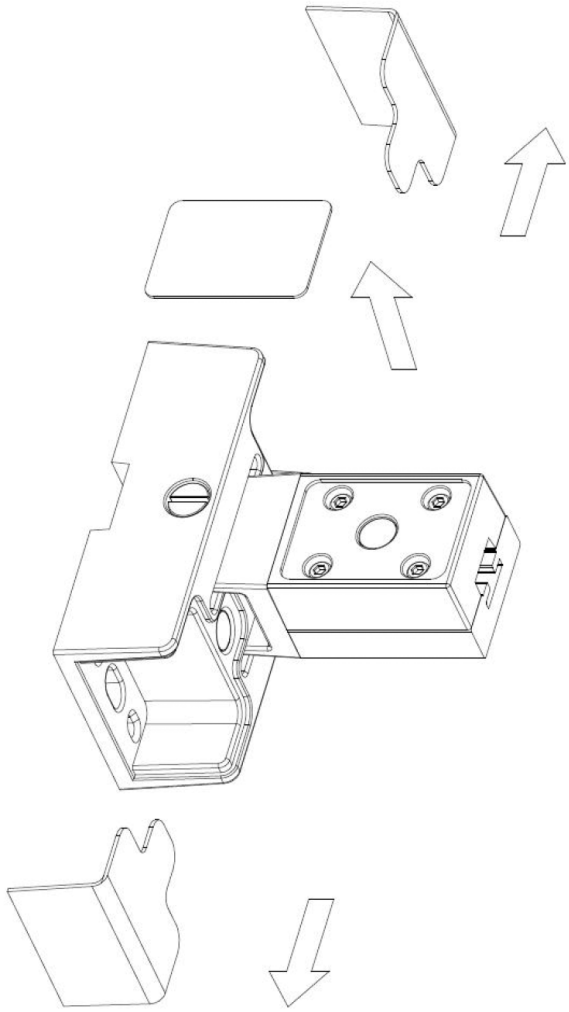


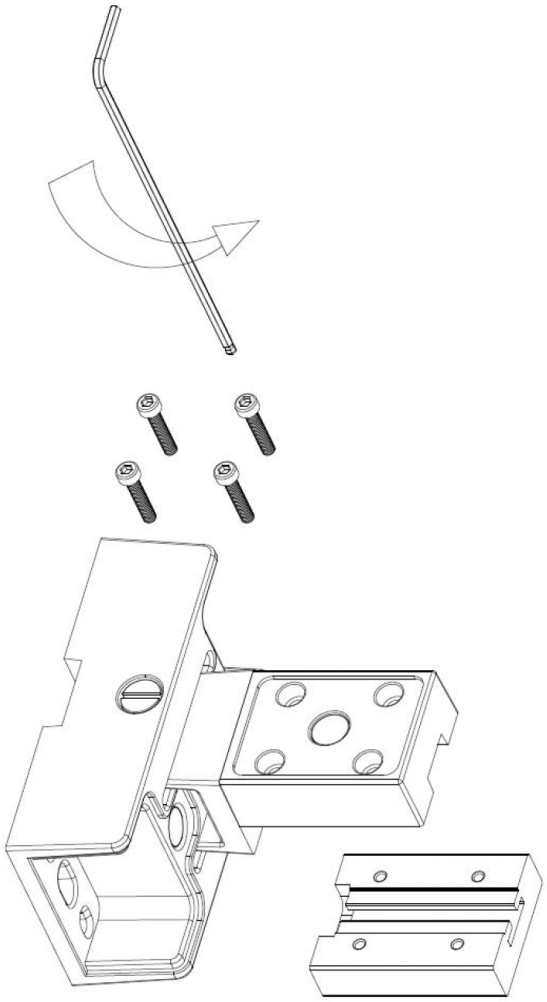
Formas posibles de instalación





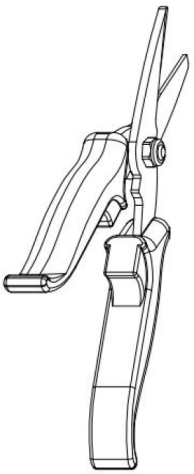
1. Instalación de la pletina de acero en el soporte corto

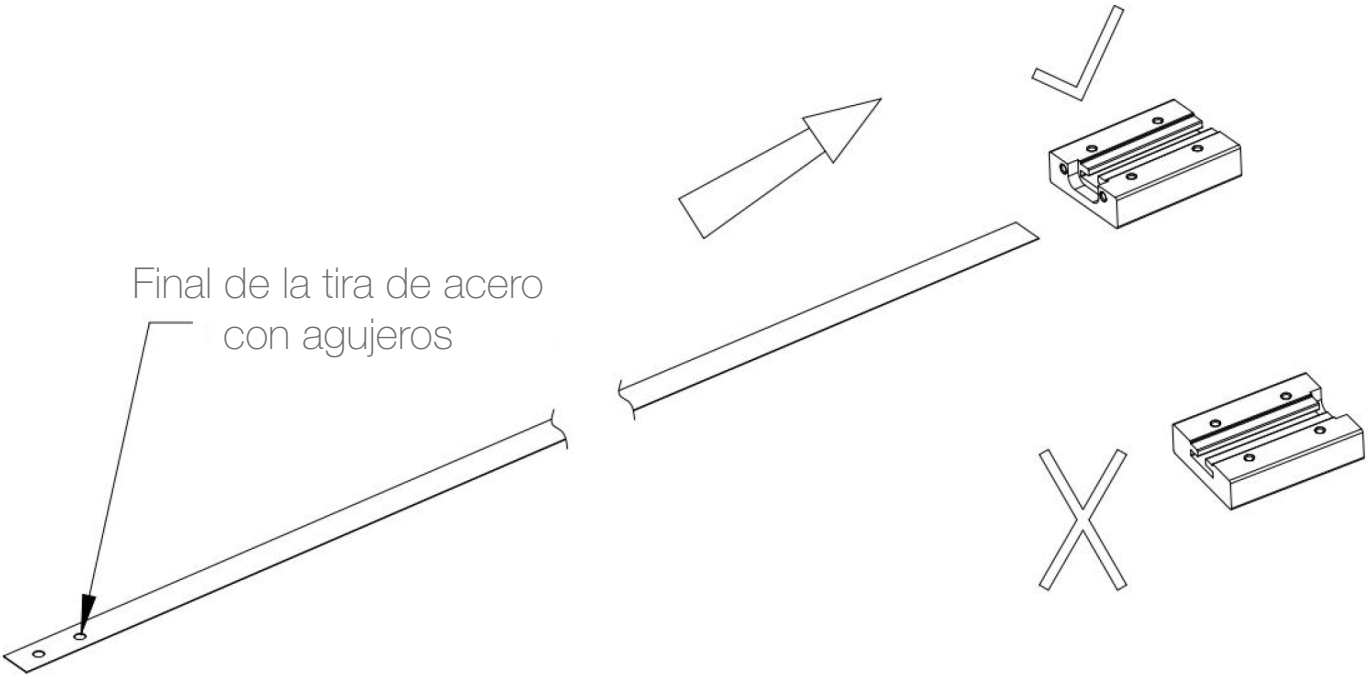


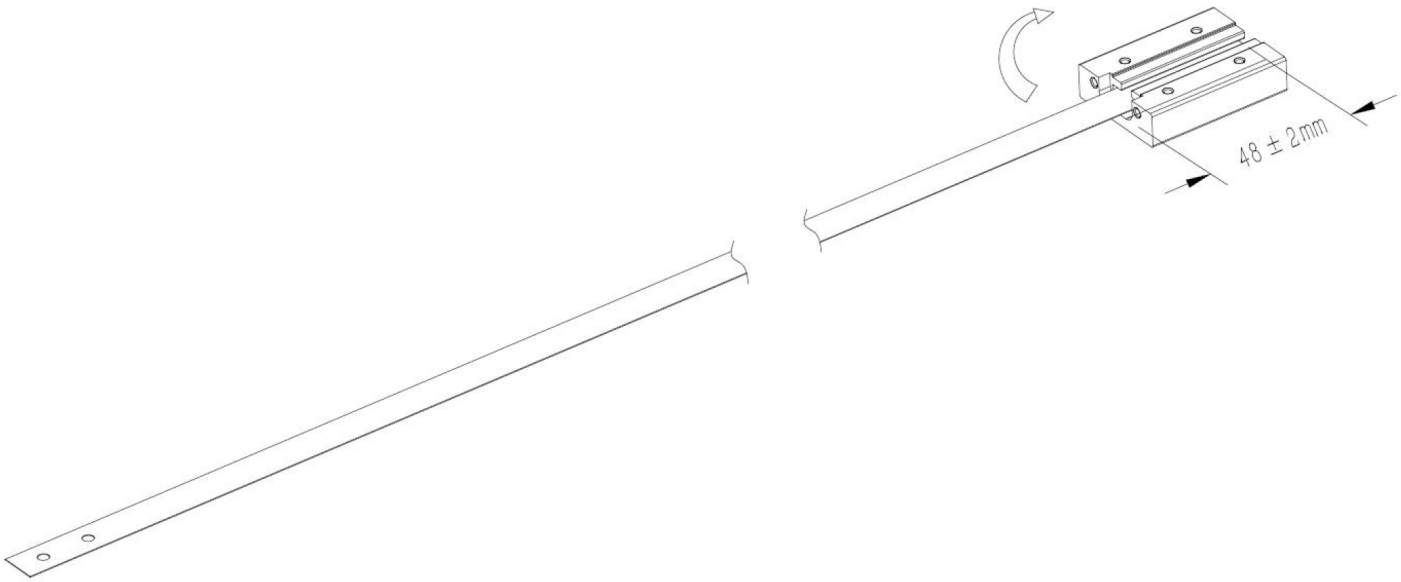


En primer lugar, sacaremos los tapones externos embellecedores, accederemos al interior y quitaremos los 4 tornillos de cabeza hexagonal

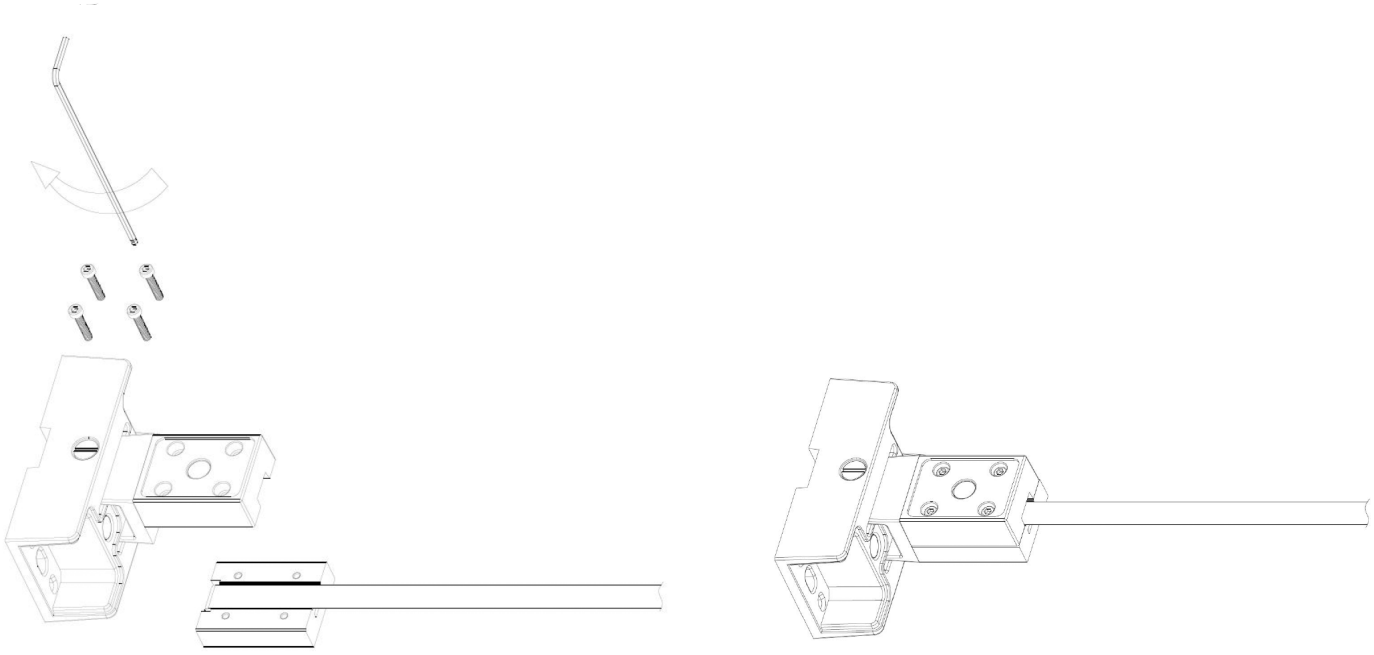
Cortaremos la tira de acero ajustandola
a la medida que necesitemos



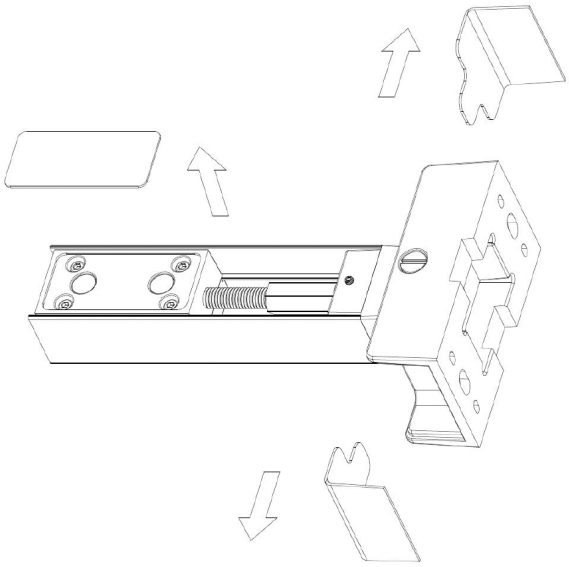


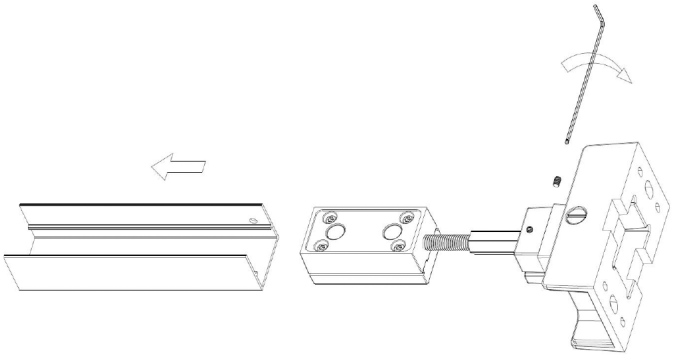


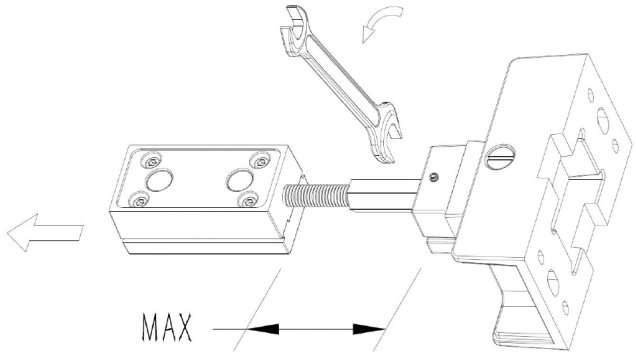
48 ± 2mm

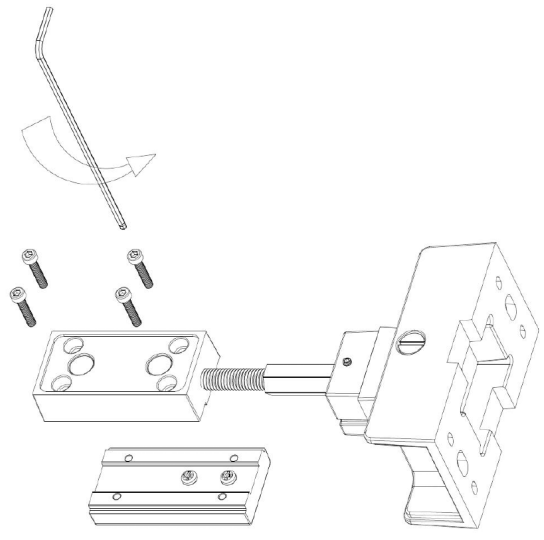


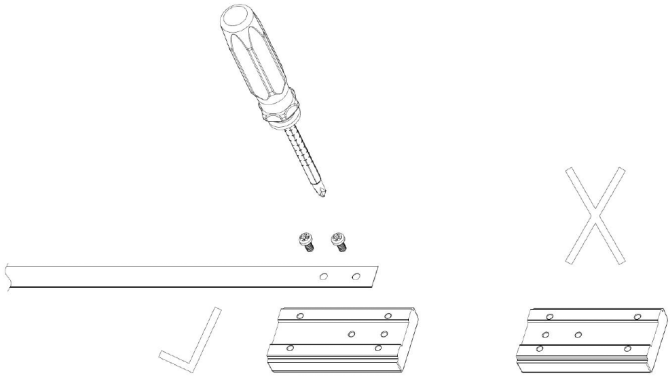
2. Instalación de la pletina de acero en el soporte largo

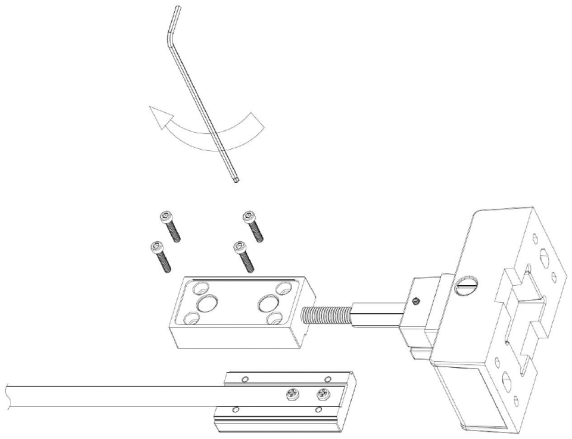


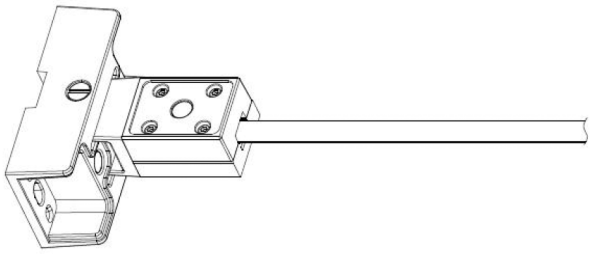


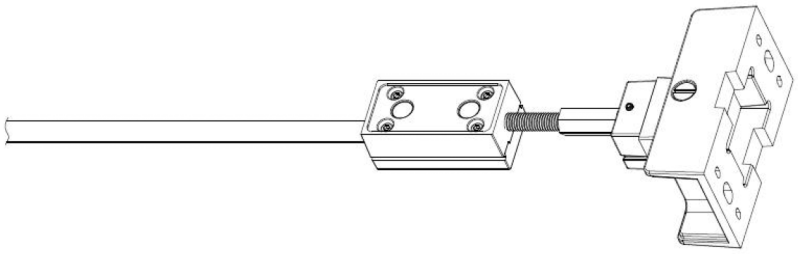












3. Instalación de los soportes a la pared
