R.R.P 2021

In 2020 in our Barcelona facilities, we have completed the building of a factory which is totally dedicated to the manufacturing of luminaires and lighting kits in mass production.

Our new luminaire division is totally free of static electricity and the environment is dust/moisture free. We also have working surface areas which eliminate static electricity and also some equipment which releases any static electricity before entering.

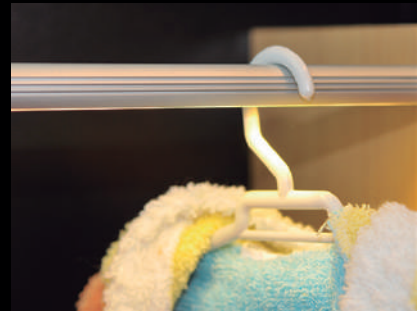

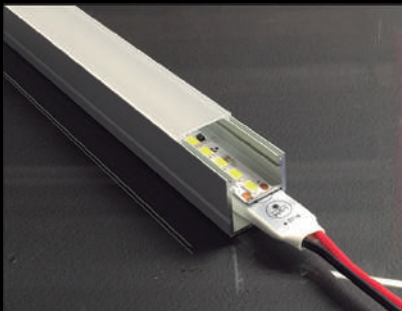

All of our operators work with special bracelets to free static electricity.

With these new facilities we are much more prepared for larger productions and above all for complying with the strictest quality controls.

Once the luminaires are manufactured they pass the necessary quality controls in our laboratory and the corresponding photometric measurements are generated and converted into IES files.

Made to measure kits

Innovation
made
in
Spain

You choose:

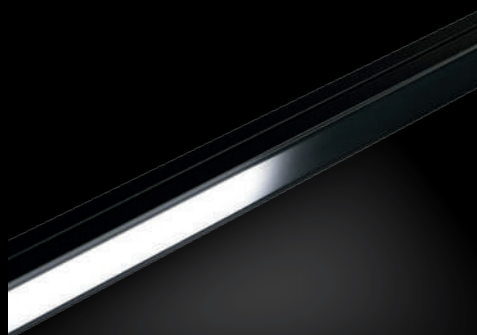

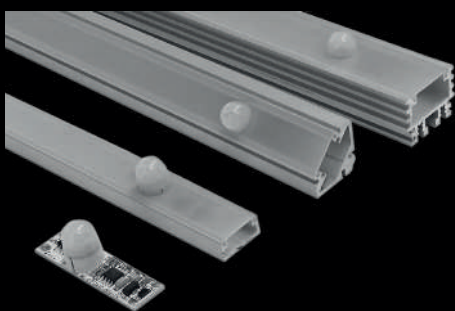

1. The profile and its length
 2. Led (model, power, etc.)
 3. Accessories (sensors, switches, hangers, etc.)
- and we will prepare it for you, all ready to be plugged in

This is a totally personalised and made to measure service.

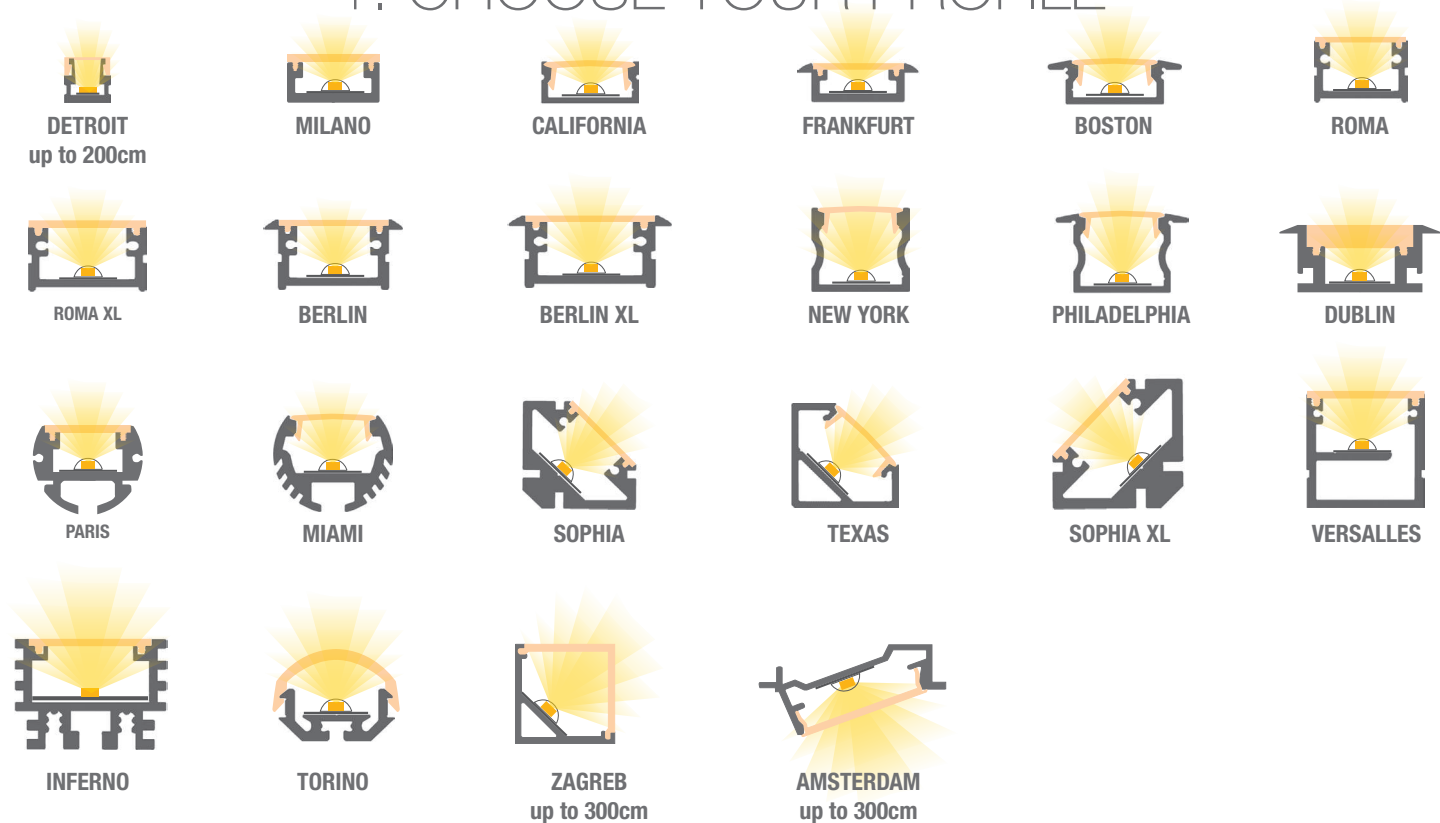

The kit includes the profile, the led, a choice of covers along with clips, endcaps and power supply with a soldered 2m cable.

Optional items include sensors, 45° angle cuts, resin encapsulation, etc. We can offer up to 6m in one single piece without any joints.

The RGB, RGB+W or WW+CW include their controllers and amplifiers. Special prices for large quantities.

1. CHOOSE YOUR PROFILE

2. CHOOSE YOUR LED

* ecoled Infinity 14 - 230V: only for profiles Roma XL, Berlín XL, Torino, New York, Philadelphia, Miami, Texas, Versailles, Inferno, Sophia XL
* Made to measure kits with ecoled RGB led strip Esmeralda, Ágata, Gerona PRO, Marbella PRO and Alicante are offered with 41.049 controller or similar.
* Made to measure kits with ecoled Nerja are offered with 41.066 controller or similar.
* Led profile Detroit can only be illuminated with ecoled Cíes PRO.
* Other accessories: extra elements to be added to the price shown on the table.

silicone led profiles (neon)

We have incorporated into our range of products 9 high quality silicone profiles with all their accessories. We can insert the required led strip inside, in order to create texts or perimetral decorative lighting. These profiles are suitable for indoor or outdoor zones (IP67).

Comments

Neón Micro, Mini, Redondo and Cuadrado:

Cies ecoled with a power of 12W/m, available in cold, neutral or warm white, red, green, blue and pink.

Neón, Doble, Las Vegas and Las Vegas XL:

Elite ecoled 15 with a power of 15W/m, available in cold, neutral and warm white, and also in pink. Marbella Pro RGBW (price does not include sequencer and amplifiers).

Maximum size in one length

Neón Micro, Mini, Redondo and Cuadrado:

With electric feed from one end: maximum 3 metres. With electric feed from two ends: Maximum 5 metres.

Neón, Doble, Las Vegas and Las Vegas XL:

Elite ecoled 15 with a power of 15W/m, electric feed from one end: maximum 5 metres; from two ends: maximum 10 metres.

*The Micro model can be used with or without endcaps, as we can always seal the ends with silicone. This neon is ideal for use in publicity and for creating small letters and texts (we find this more attractive without endcaps).

skyled

made to measure

Our wide range of made to measure luminaires can be manufactured on an individual basis and in lengths of up to 6 metres without any types of joints.

Our luminaires are designed and manufactured entirely by Luz Negra (made in Spain) and are a perfect match for our led profile and our rigid strips from the German company Vossloh-Schwabe.

We offer versions for recessing, surfaces, hanging, cornices and also for using as wall lamps.

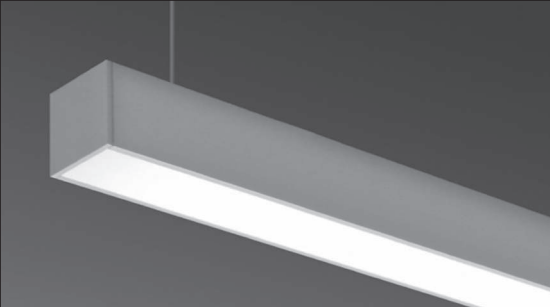

Dimmable or non-dimmable, 1-10V, Push or DALI.

Available in white, black, silver or can be personalised. They offer us efficiencies greater than 165 Lm/W and up to 9160 Lm (lineal metre).

We offer different types of covers: standard, microprism with symmetrical optics, asymmetrical, etc.

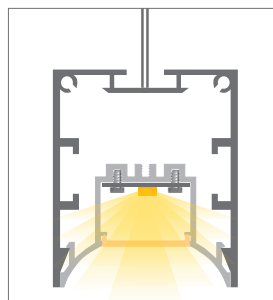

If requested, we also offer relevant luminous calculation studies and corresponding files for our luminaires, to be used with **DiaLux** and **RElux** programs.

Emergency kit for luminaires (optional).

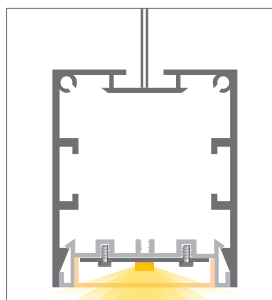

Hanging luminaires - made to measure

Skyled Channel

The DALI professional lighting system is the easiest and fastest on the market with regards to installation.

Luminaire lengths: 171cm and 285cm
Standard colours: lacquered white - lacquered black

Up to:
7000 Lm/m
189 Lm/W

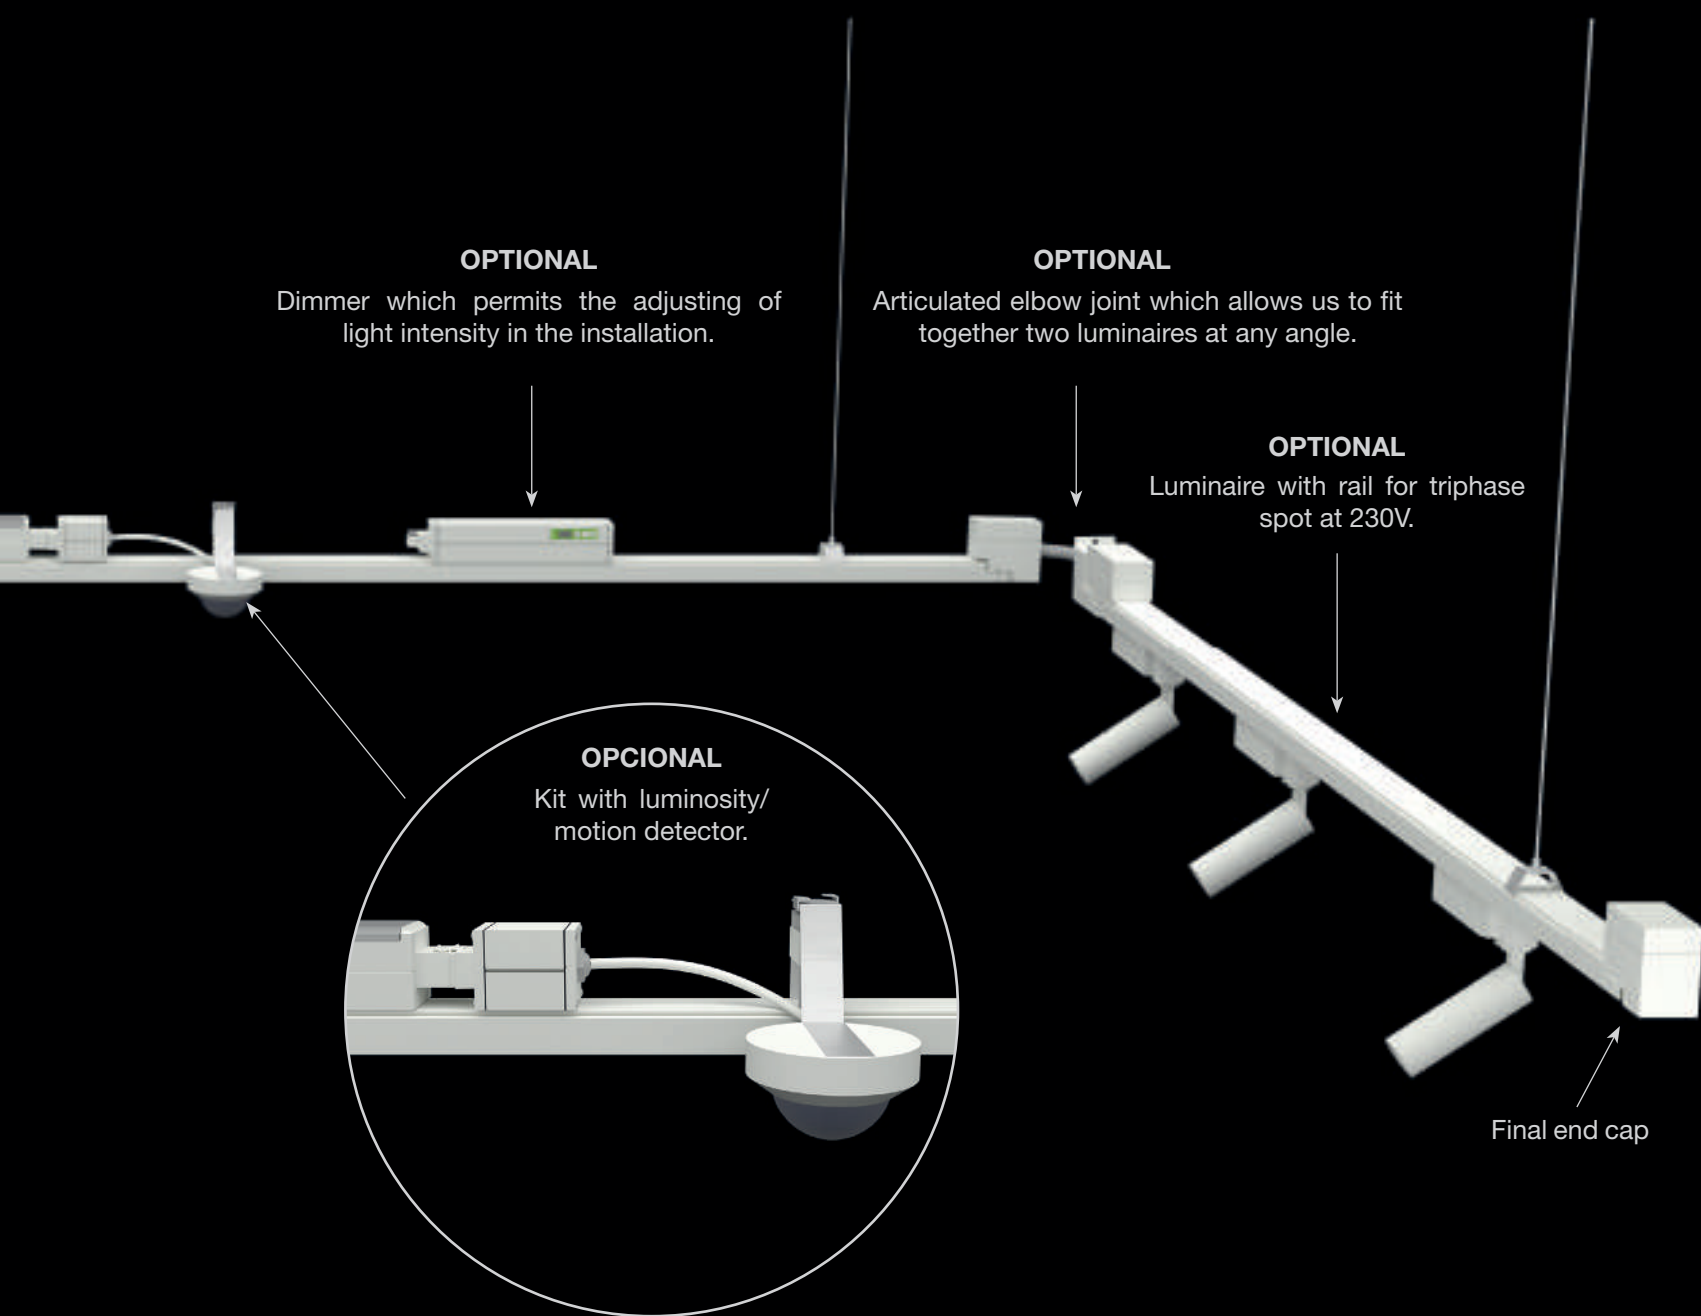

Led + power supply
+ emergency kit
VS LIGHTING
SOLUTIONS

5 year
guarantee

Innovation
made
in
Spain

Up to 200m
with only one
electric supply

Up to 16A
with only one
electric supply

Covers available: transparent - frosted - opal - microprism
Optics available: wide - narrow - drop - batwing - asymmetric

Our luminaires are available in 2 lengths: 2837mm and 1713mm and are supplied in white lacquered or black lacquered. Inside there is a channel with 8 cables, three-phase (three-phase system) + neutral + earth+ emergency + 2 cables for the DALI system.

It offers a waterproofing of IP52 when normal covers are used and IP42 with optics. The luminaire is of Spanish manufacturing and the led inside is by the German company Vossloh (Panasonic Group).

Each luminaire includes an external power supply and 2 clips for hanging. The luminaire also acts as a cable channel (this is where it gets its name from) and apart from giving off light, each section can also be used as an external bypass (of up to 1 ampere) to feed other elements such as lightboxes, vending machines, auxiliary light etc.

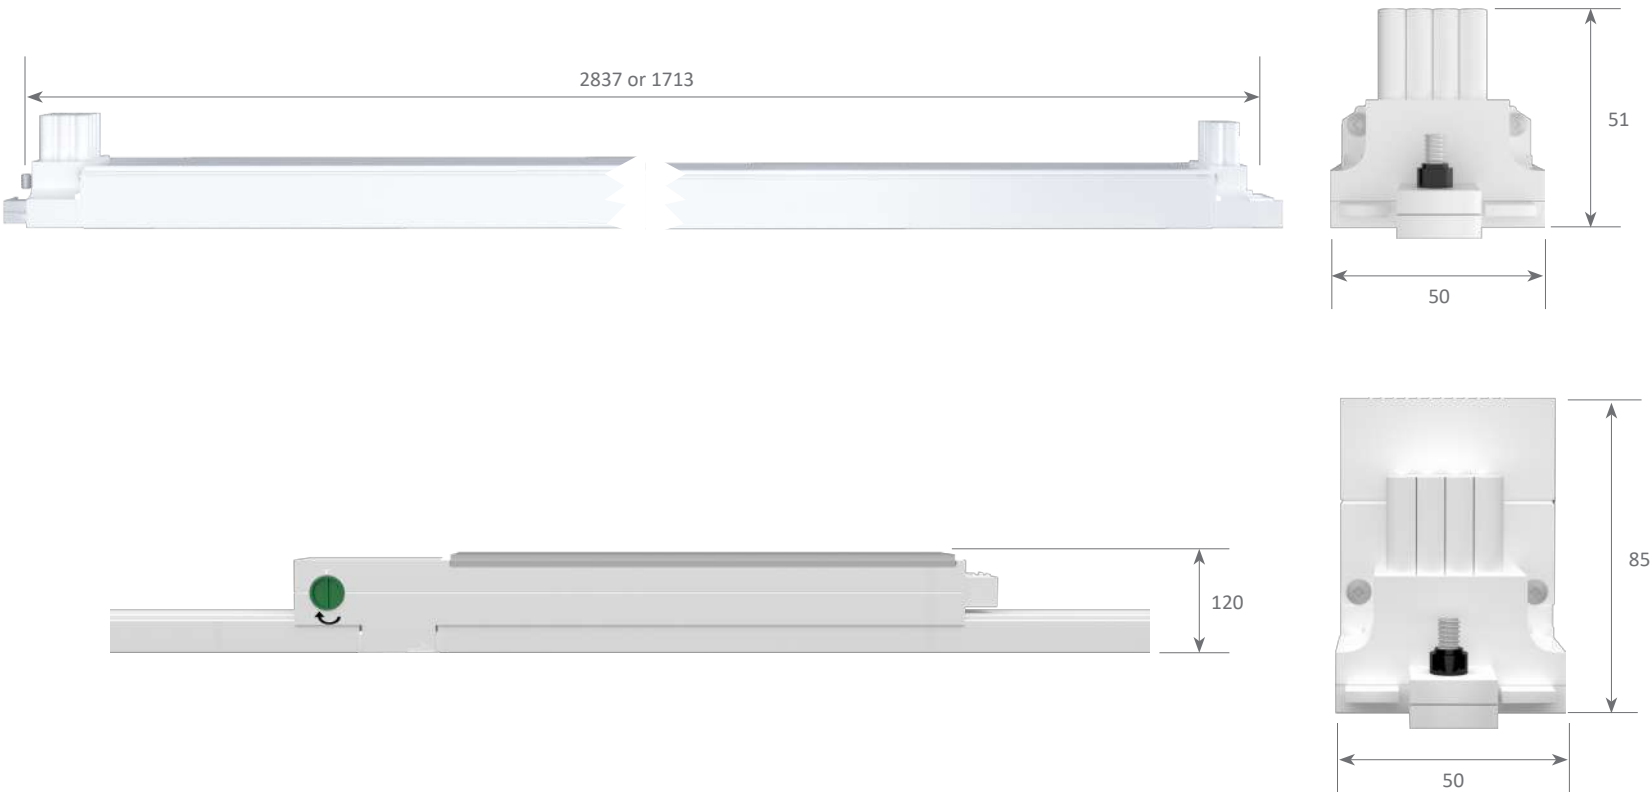

This luminaire can also admit blind sections, meaning only the channelling of cables without any type of led or optic, perfect for installations where a continuous light line isn't required.

It offers a waterproofing of IP52 when normal covers are used and IP42 with optics. The luminaire is of Spanish manufacturing and the led inside is by the German company Vossloh (Panasonic Group).

Each luminaire includes an external power supply and 2 clips for hanging. The luminaire also acts as a cable channel (this is where it gets its name from) and apart from giving off light, each section can also be used as an external bypass (of up to 1 ampere) to feed other elements such as lightboxes, vending machines, auxiliary light etc.

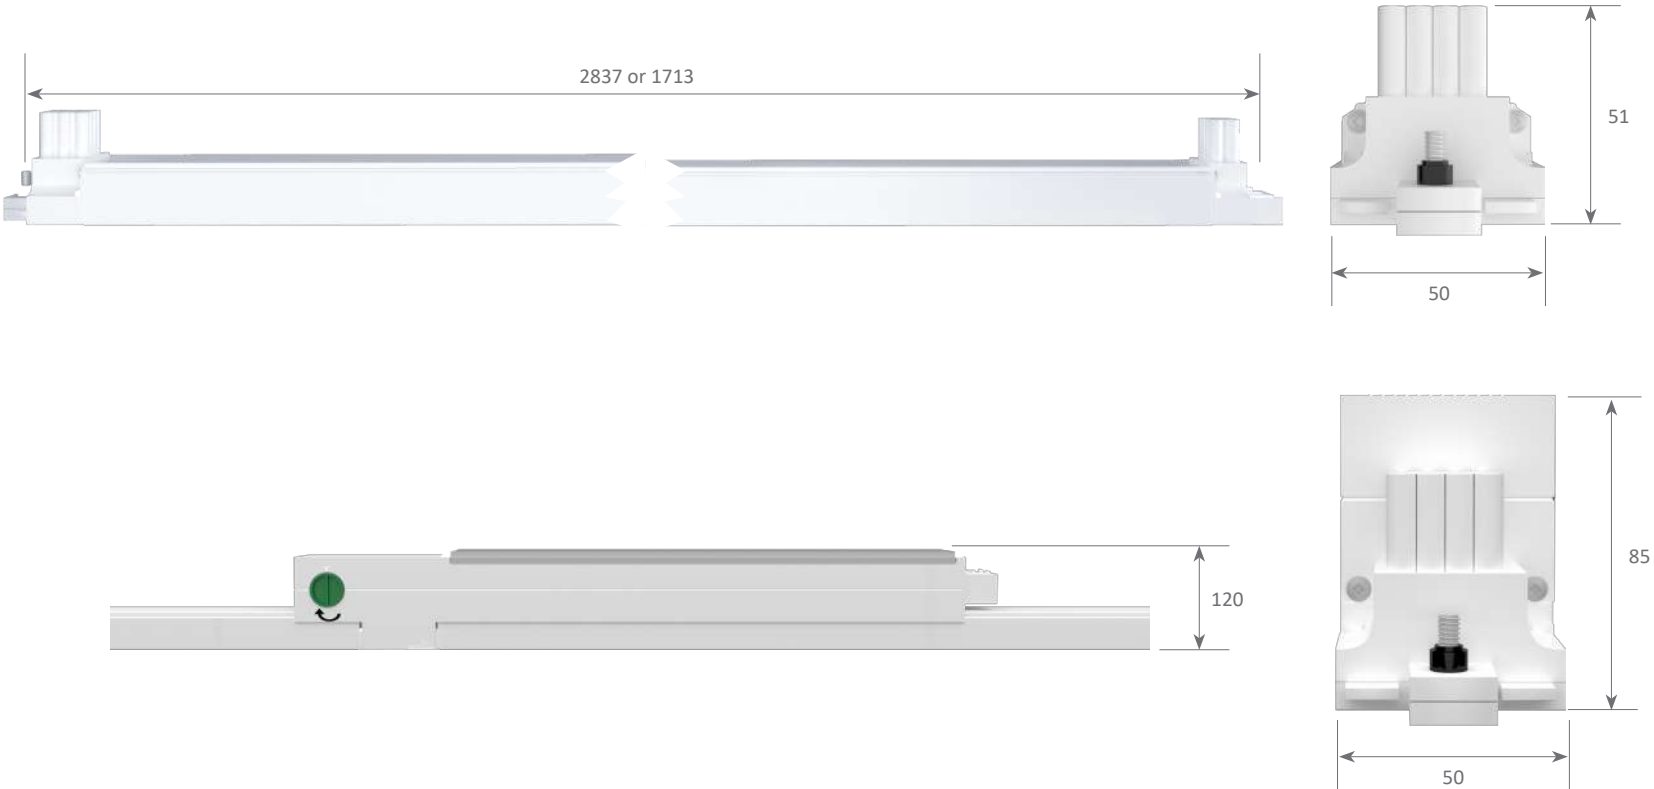

This luminaire can also admit blind sections, meaning only the channelling of cables without any type of led or optic, perfect for installations where a continuous light line isn't required.

Linear lighting system with steel tape

A thin strip made of stainless steel, which only 15mm in width, produces an indirect light line. It can be adapted to different situations, stretching it from wall to wall, with different degrees of inclination or from ceiling to floor, according to the needs of each project.

It comes in strips of 10m or 30m and can be cut to desired length (20m lengths can be requested. Please check price with our commercial department)

Led strip not included.

Recommended for use with led strips with a PCB of maximum 12mm.

Recommended for use with leds strips with a maximum power of 15W/m

Bracket (A)

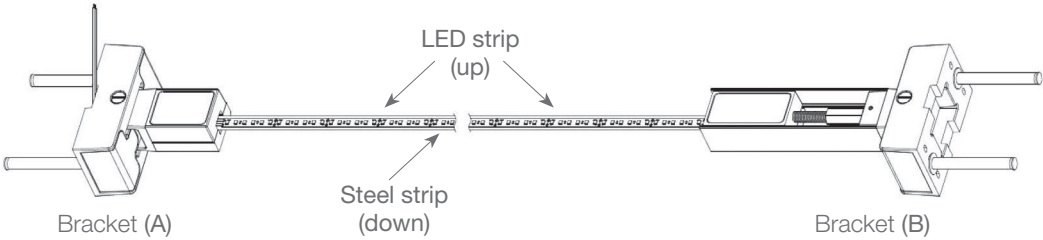

Bracket (B)

Saturno

Saturno is a collection of luminaires manufactured in circular and curved shapes which allow us multiple combinations and geometrical forms.

They offer illumination by means of high luminosity rigid strips. Used for hanging purposes, surfaces and wall applications.

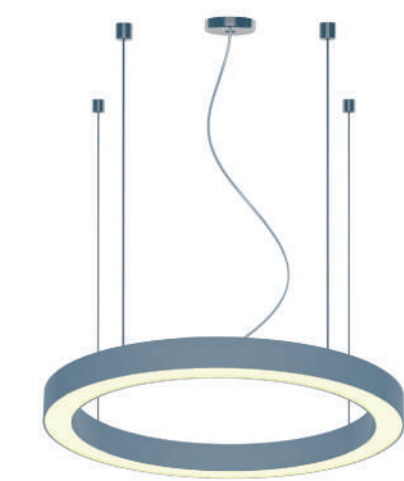

Luminaires with a diameter of 66cm, manufactured in textured lacquered white or black aluminium and illuminated with a led strip in 3000°K - 4000°K - 6000°K.

It can be used on surfaces or for hanging applications (using hanging kits). A small rosette is included.

The rosette reference 46.015 is supplied on request and is needed when we use more than one circle in the same composition.

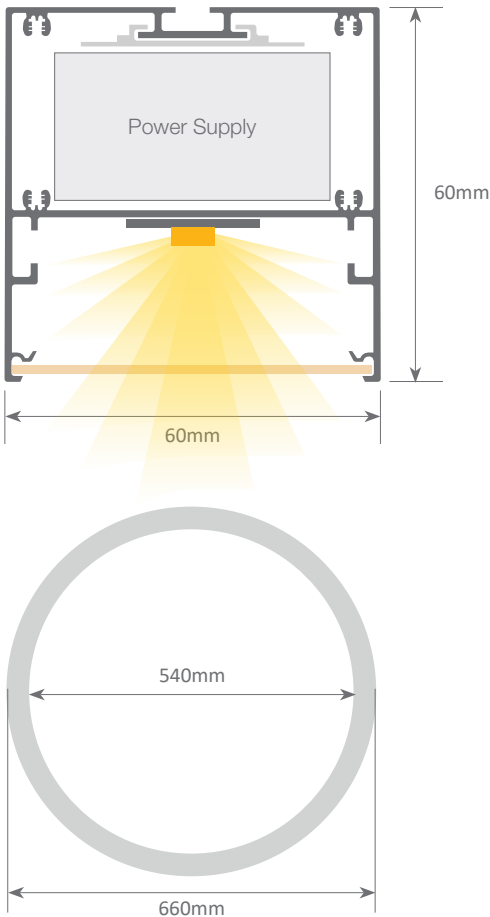

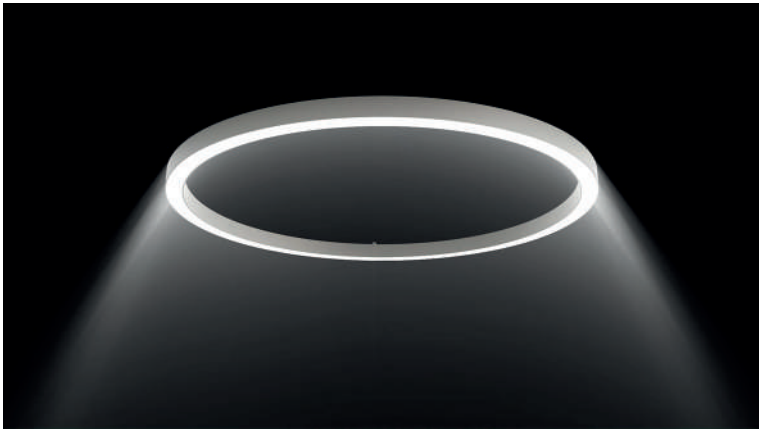

Saturno 60

Customised projects

Here at Luz Negra we can offer circular luminaires (with up to 5m diameters), for surfaces, hanging applications, for recessing with UP&DOWN lighting, with DALI system, 1-10V or any other irregular shapes requested on demand for specific projects.

We can also offer customised colours for the profile and even the profile dimensions can be personalised, with more than 10 options available.

The supply time for these luminaires is approximately 60-80 days and can be totally customised for special projects.

Please consult with our projects department: proyectos@luznegra.net

Mercurio

Venus

Urano

Neptuno

Luminaires shinka **Onelight**

With this new system, we achieve a minimalist and delicate concept where we integrate light in a homogeneous manner in any space. Here at Luz Negra we are now moving on from conventional lighting for ceilings by now offering architects and designers a whole new concept in the freedom of creating illuminated spaces.

In order to make the most of the space, they are made to measure, with depths of 8 to 15cm. We can manufacture them up to a maximum of 2x6 metres. It is suitable for multiple installations, surfaces, ceilings, walls, and hanging applications.

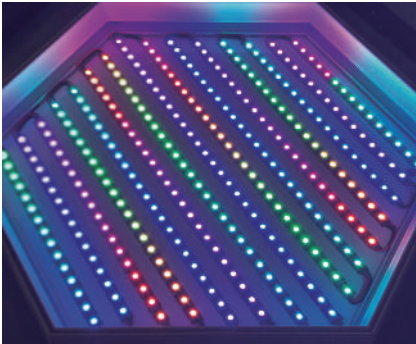

The profiles can be finished in textured lacquered white, textured black and silver anodised.

Its textile front creates a homogeneous distribution of the light which, combined with led lighting, achieves a luminaire which discretely blends into its surroundings and at the the same time, gives out light in a uniform manner and without any glaring effect.

We have a customised solution for every project. Luminosity data is based on supplier’s data sheets for led strips (sideview pro).

Custom-made light boxes with frontal textile and RGB digital led inside. Profile of aluminium F110 (depth of 11cm), white/black lacquered or silver anodised. Rear side of black alucobond.

It includes white, translucent frontal side, power supply and controller ref: 41.047 (externally installed), a mapping of the installation and 5 default effects from our standard collection (fire, water, waves, plasma, etc.).

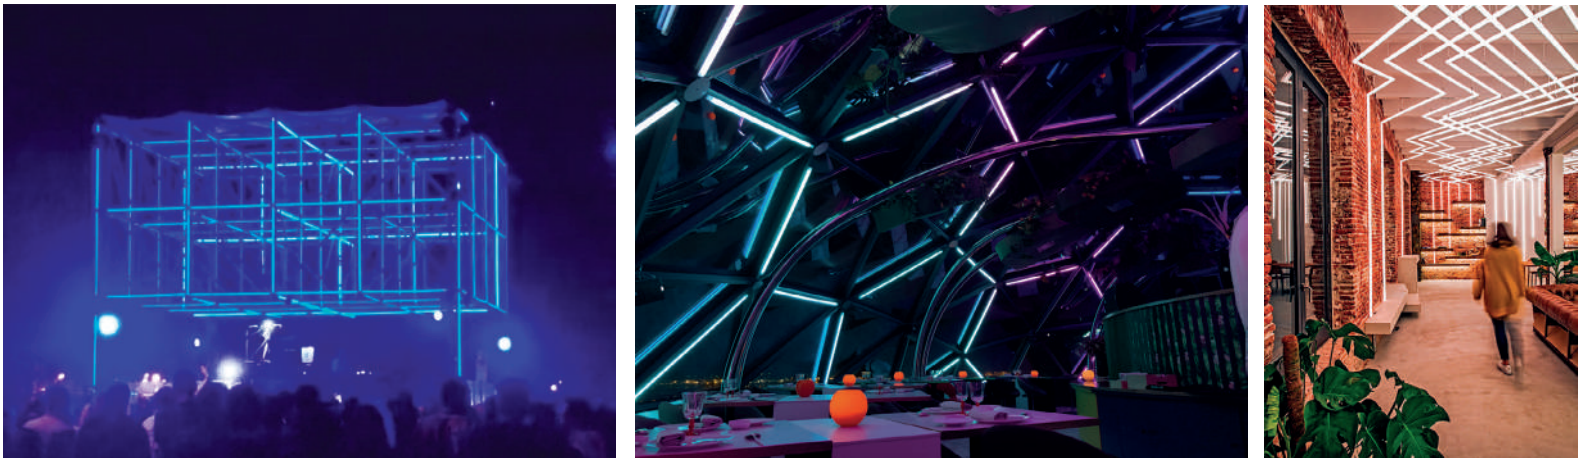

On demand, we can quote special, customised effects and other types of controllers.

Luz Negra manufactures luminaires, which can also be personalised with textile fronts. We also supply a printing service for the front image along with various programming options for the led lighting effects.

Check with the comercial department.

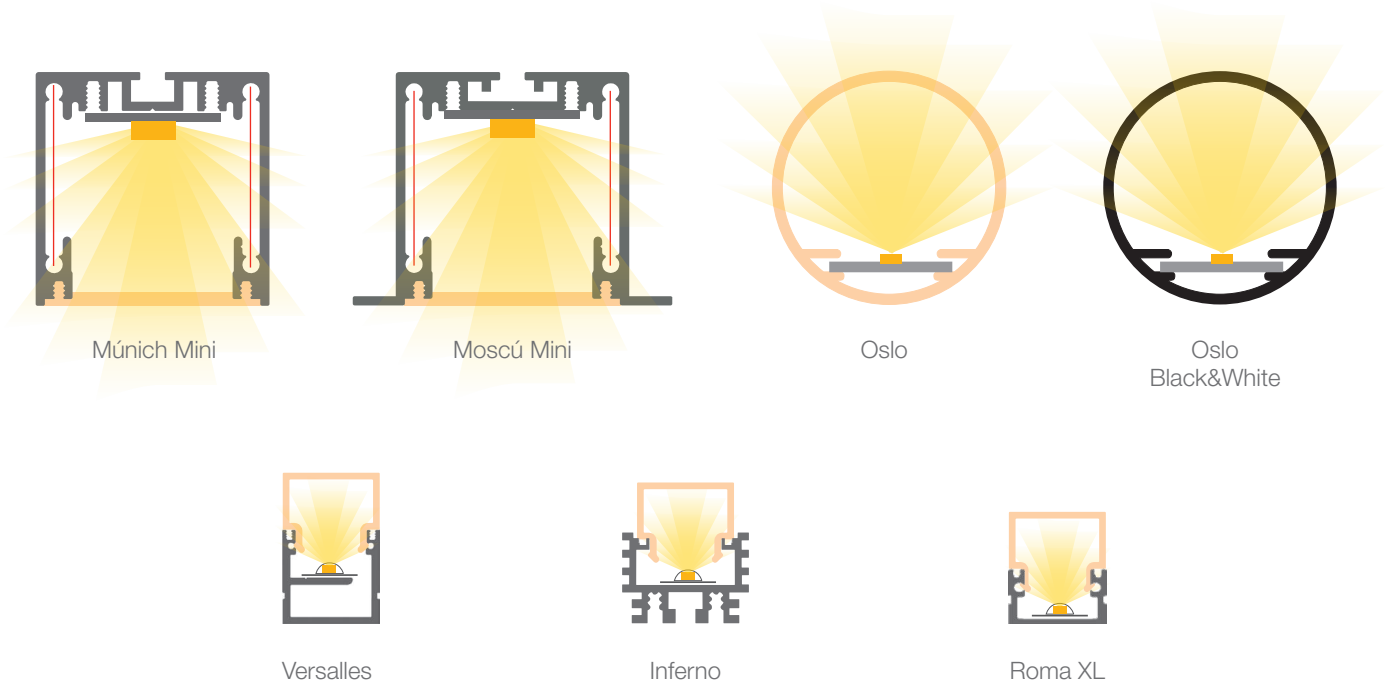

Digital linear luminaires - made to measure

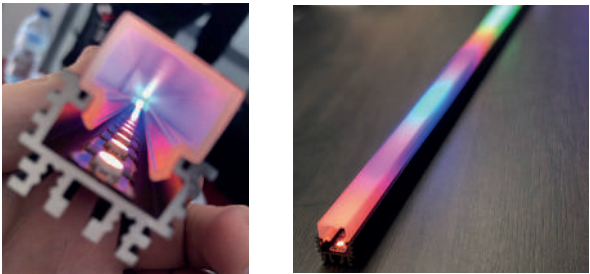

Luminaires manufactured with led profiles, containing our “Hawai” digital led strip inside. Power supply is not included as various luminaires can share the same one.

Various programs are available: standard content (many different programs to choose from) or customised programs (please check extra cost).

Led profiles available with white covers or our Black&White version.

Here at Luz Negra we have been manufacturing light boxes for the signage industry since 1987. The light boxes are luminaires which can be placed on walls, ceilings and even suspended from the ceiling with hanging kits.

At Luz Negra we manufacture these luminaires in different sizes (from just one unit) and supply times are approximately one week. Our clients can choose from light boxes with depths of only 1.5 cm (panels) right up to boxes with depths of 12cm (we can offer up to 17cm on request).

These light boxes differ from those used in signage as they have leds which offer high luminosity and a frosted methacrylate front, which gives increased light transmission and an anti-reflective effect which hence favours the UGR.

Publicity luminaire for walls, manufactured with a silver anodised profile with a depth of only 5cm.

Thanks to its foldable front, publicity or decorative material can be easily placed and removed without the need for any tools.

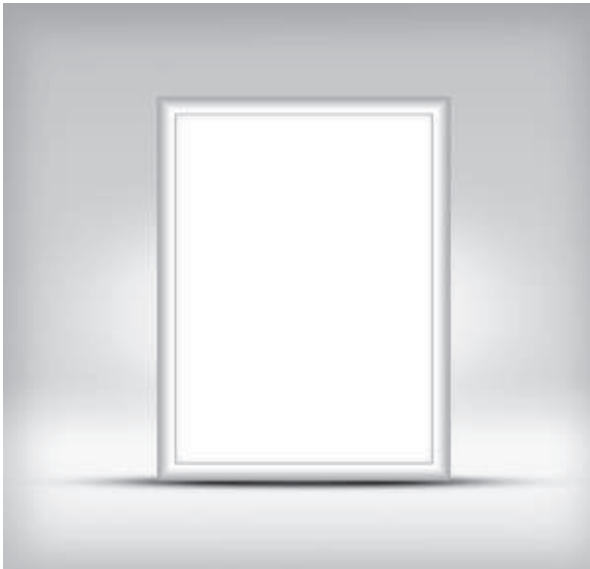

The led lighting inside is via strips with symmetrical lenses (170º) and has a white frosted methacrylate front of 3mm thickness.

Includes external power supplies.

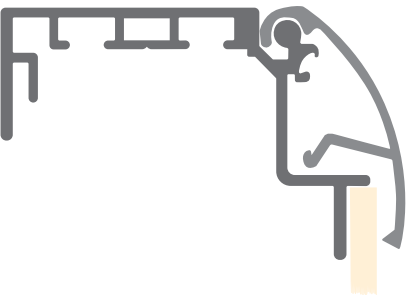

The indicated dimensions are the final exterior sizes. They can be manufactured in special sizes and totally personalised (MOQ just one unit).

This product is 100% Made in Spain (manufactured in our Barcelona factory).

* (Lm) the data reflected in the table can vary according to manufacturing.
- Luminosity data is based on supplier's Vossloh-Schwabe data sheets for led strips.

Publicity luminaire for walls, ceiling or hanging purposes (hanging kit not included in price), manufactured with a white or black lacquered aluminium profile or silver anodised with a depth of 8.5cm.

Publicity or decorative material can be easily changed by removing the silicone strip from the front.

The led lighting inside is via strips with symmetrical lenses (170°) and has a white frosted methacrylate front of 3mm thickness.

Includes internal power supplies. The indicated dimensions are the final exterior sizes

They can be manufactured in special sizes and totally personalised from (MOQ just one unit).

This product is 100% Made in Spain (manufactured in our Barcelona factory).

Customised flexible led strips (welded)

Recently we have launched our new “static-free” factory where we can now offer our clients all our flexible led strip models (our full catalogue range) with exceptional quality and at the same time with an almost immediate supply time.

All the strips are clearly identified and supplied with their corresponding labels. They come with a 1m cable on one end and with a silicone end cap (for waterproof strips).

The soldering is protected with a silicone thermo-retractile casing for extra resistance and a longer life.

The strips can also be supplied with welding on both ends, with extra cabling and with soldered joints (in the case of strips longer than 5m).

The indicated prices are RRP for single units. Please consult our special prices for larger quantities.

You can find all corresponding technical data for all of our led strips in our new catalogue.

We also offer our clients free photometric studies and “ies” / “ldt” files for Dialux and Relux, for any of our led strips.

- **Example:** A led strip, ecoled “Elite” 20 (380cm): 3.8m x 12.32€/m. (cost per metre of Elite 20) = 46.81€ + 5€ (welding cost) = **51.82€ Total.**
- **Example with other options:** A led strip “Ibiza PRO” (720cm) with cables (250cm) on both ends: 7.2m x 10.56€/m. (cost per metre of Ibiza PRO) = 76.03€ + 7€/each x 2 (welding cost x 2 as there are 2 cables ,1 on each end) + 3€/each (cost of the joint as it's longer than 5m) + 2€/m x 3m extra cable (extra cable of 1.5m on each end) = **99.03€ Total.**
- The minimum price for a length of ecoled strip corresponds to 50cms.
