

LUZ NEGRA

linear lighting solutions

A product guide for linear lighting projects

“meliorē facere continenter, signum noster est”

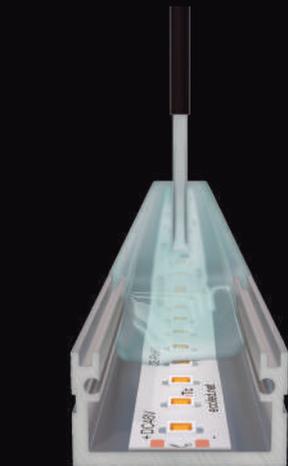

New UNDERWATER SYSTEM machine

Here at Luz Negra we have acquired a machine for waterproofing the luminaires which we manufacture, meaning we can offer IP68 and a resistance on the surface of IK10.

Our customers can request their luminaires to be waterproofed from just one unit, in a very short time and at a very reasonable price.

This means they can benefit from a full guarantee for outdoor use even in saline environments, chlorinated pools and arid areas.

Transparent

By filling the profile with transparent resin, we achieve a crystalline finish with hardly any light loss. It is ideal for when led visibility is not an issue or for when we use COB led.

Mixed

By filling $\frac{3}{4}$ of the profile with transparent resin and the remaining $\frac{1}{4}$ with opaline resin, we are able to achieve a blurring of the dots with little light loss. It is ideal for when we use strips with a medium-high density of LEDs.

Opal

By filling the entire profile with opaline resin, we can achieve a dot-free effect, even in strips with low LED density.

Applus IK10 certificate

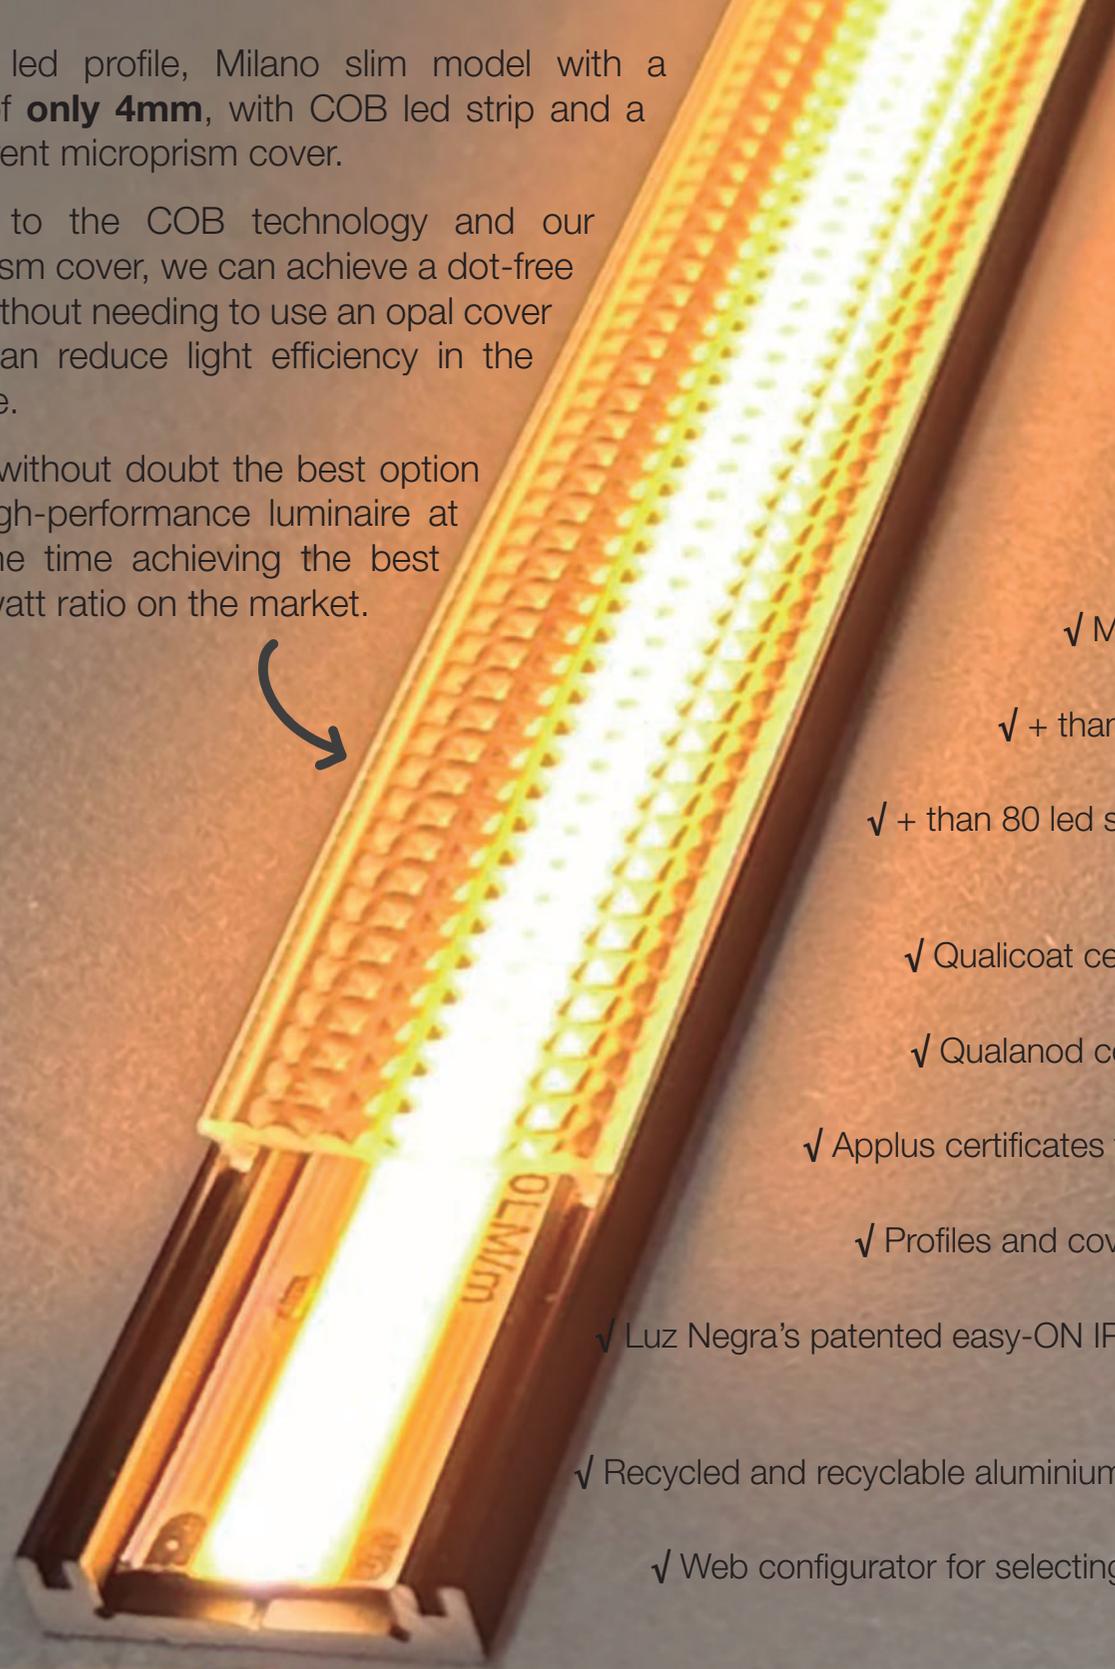

Applus IP68 certificate

Flexible led profile, Milano slim model with a height of **only 4mm**, with COB led strip and a transparent microprism cover.

Thanks to the COB technology and our microprism cover, we can achieve a dot-free effect without needing to use an opal cover which can reduce light efficiency in the luminaire.

This is, without doubt the best option for a high-performance luminaire at the same time achieving the best lumen/watt ratio on the market.

General catalogue 450 pages

- ✓ Made in Spain product.
- ✓ + than 160 profiles in stock.
- ✓ + than 80 led strips and led modules to choose from.
- ✓ Qualicoat certificate for lacquered.
- ✓ Qualanod certificate for anodised.
- ✓ Applus certificates for IP65 - IP68 - IK10.
- ✓ Profiles and covers of up to 6 metres.
- ✓ Luz Negra's patented easy-ON IP65 system for profiles and covers.
- ✓ Recycled and recyclable aluminium with a purity of 98%.
- ✓ Web configurator for selecting the adequate profile.

This isn't a product catalogue but more of a simple work tool, where you can find our **profiles in a scale of 1:1** and which is aimed at architects, decorators, interior designers and project consultants in general. It is a very handy and useful tool which can be taken to work sites, meaning you can easily and quickly identify and choose the profile, the LED and all the relevant accessories (such as power supplies and drivers), suitable for each project.

We are a Spanish family business that is committed to the idea of "Made in Spain" and to continuous innovation, made up of more than 60 professionals between our headquarters in Barcelona, Madrid and Paris. Exclusive dedication to the professionals in the sector and 36 years of experience guarantee our professionalism and trajectory. Entrust us with your linear lighting projects and let us show you a different way of understanding lighting with practical and innovative solutions.

Luz Negra's led profile "easy-ON" system has been certified by Applus for its jagged cover which guarantees water-tightness of IP65 thanks to its double-siphon shape once inserted into the aluminium profile. This certification is extended to the 33 profiles within our "easy-ON" product group

IP65 certificate

European patent

IP65
10 YEAR GUARANTEE
for "easy-ON" profiles

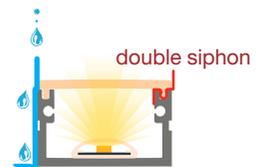

4 YEAR GUARANTEE
for "easy-ON" covers

With other systems

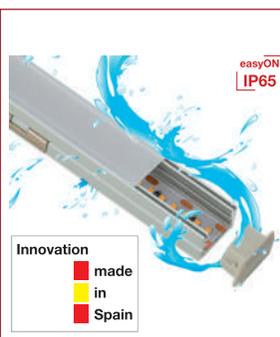

As we don't have a double siphon, the water can easily filter inside.

With our "easy-ON" system

The double siphon prevents humidity or water from filtering inside.

Led profiles covered within the IP65 certification and European patent 13156605.1

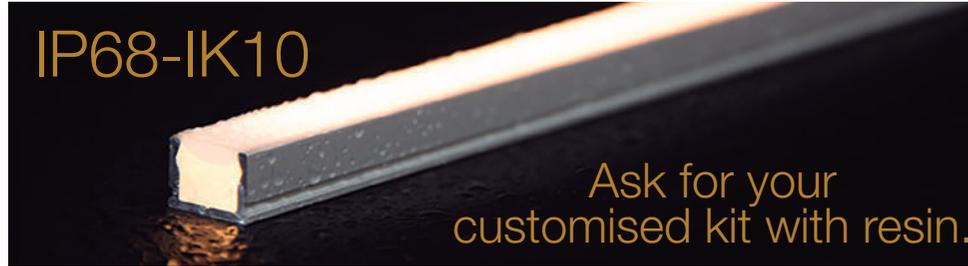

easy-ON
IP65

The "easy-ON" system is the result of continued research, development and innovation which we enforce at Luz Negra. This system permits you to quickly click the cover on to the front of the profile in a fast and easy manner.

The two jagged edges allow the cover to snap on to the profile in a firm and safe way, achieving a water-tightness of IP65.

COMENZA

Our led profile Comenza is ideal for wall installations as a handrail, lighting up corridors and staircases etc.

We can integrate our Versailles profile (most recommended option) or Philadelphia model into this profile.

In addition, it has a wide range of accessories such as wall supports, end caps, joining pieces and open or closed elbow joints.

Types of covers and how to choose the most adequate for each project.

Transparent - 90% light transmission: for installations where a dot-free effect is not essential.

Transparent microp prism - 85% light transmission: combined with our COB led, it provides maximum light output without a dotting effect and at the same time lowers the UGR.

Frosted - 70% light transmission: white cover with a high level of light transmission. Ideal for COB led strips or with a high density of leds (from 140 leds in normal profiles and 240 leds in small profiles).

Opal - 60% light transmission: white cover with a medium level of light transmission that allows greater diffusion of the leds (for strips with low density).

Black&White - 25% light transmission: black cover that blends in with black furniture or walls when the led is off. When turned on, gives off a decorative light without altering the original colour of the led.

Square - 70% light transmission: offers side lighting (as well as from the front) and greatly diffuses the led dots even in very low density strips.

Square rounded corners - 70% light transmission: its rounded edges offer a homogeneous dimming of the led. As it is lower than the square cover, it gives less side lighting, but the rest of the benefits are identical between the two.

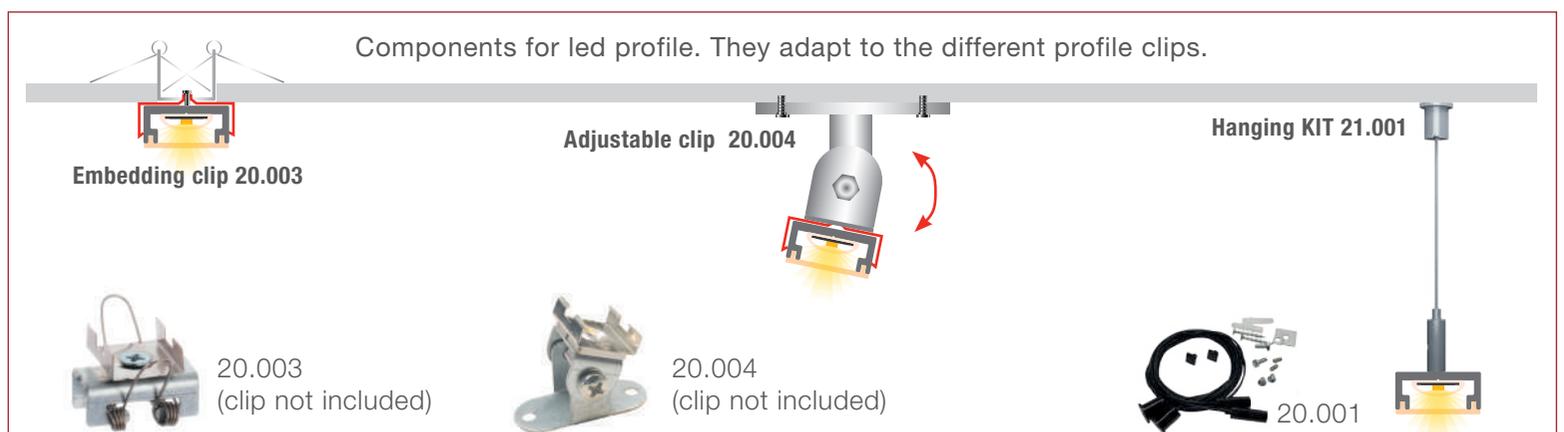

Black&White square - 25% light transmission: mix between the square cover and the Black&White cover. It allows front and side lighting with great diffusing power and is totally black with the light off.

Side wings - 65% light transmission: original design which is similar to a reflector effect. We can direct the light beam towards a smaller surface, improving the anti-glare. The wings are frosted so they emit a soft light outwards. Combined with our profile Paris XL, it brings elegance and sophistication to the installation.

Flex&Cover - 50% light transmission: robust treadable rubber cover that is supplied in rolls of up to 50 metres to create long luminaires without any frontal joints. In addition, it offers a great dot-free effect.

Treadable IK10 - 65% light transmission: cover for treadable profiles with its corresponding Applus IK10 certificate.

Opaque - 0% light transmission: opaque cover that does not transmit light. Ideal for blind sections in luminaires.

Front removable tray system (safety anchorage)

safety cable to hold tray to profile
profile clipping with tray
holding screw from tray to profile

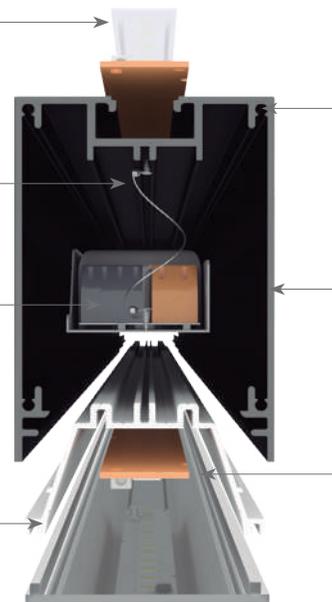

System with front removable tray which permits easy access to the led strip and power supply, therefore allowing very fast and simple maintenance.

Up&Down cover available in transparent or frosted white.

Safety cable which fixes the removable tray to the profile and also making maintenance easier.

Vossloh-Schwabe power supply with Dali, 1-10V or PUSH controllers, offering a 5 year guarantee.

Aluminium front removable tray with triple safety system (clipping of cover, safety cable and screw).

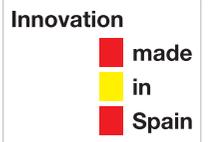

Internal side cavities for holding profile joints and for the corner brackets in the case of requiring luminaires with angles.

Aluminium profile (98% purity), both in a lacquered and textured finishing (Qualicoat), available in black or white. Also available in silver anodised (Qualanod) of 15 microns

Rigid led strip (Vossloh-Schwabe) for Up&Down lighting, offering constant current and up to 9000 lumens per metre (170 Lm/W). We offer a 5 year guarantee.

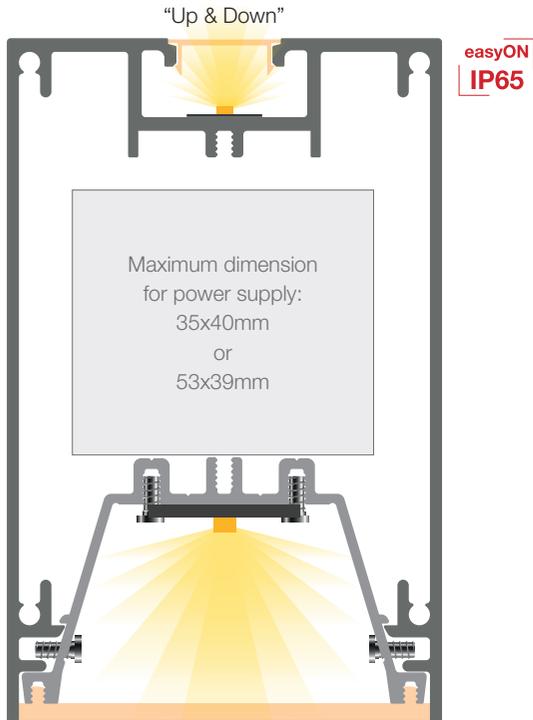

“easy-ON” IP65 cover (Luz Negra European patent), available in opal white, transparent microprism and Black&White.

At Luz Negra quality is not an option, but an obligation.

We have our own laboratory at our main factory in Barcelona, where we carry out exhaustive quality controls, both of the raw material and of the products we manufacture before supplying them to our customers.

Salt spray chamber (corrosion tester):

This machine tests the resistance of products in humid and saline environments (near the sea).

Spectroradiometer with a 120cm sphere:

For carrying out photometric studies and measurements on both raw materials and manufactured luminaires.

Goniophotometer in Dark Room:

This generates IES and LDT files for 3D rendering programs and light calculations such as DIALux and Relux.

Waterproof testing chamber:

This equipment tests the resistance of products that must work submerged up to 29 atmospheres.

Torsion testing for flexible led strips:

This carries out torsion cycles on the flexible strips to check the resistance under harsh manipulation.

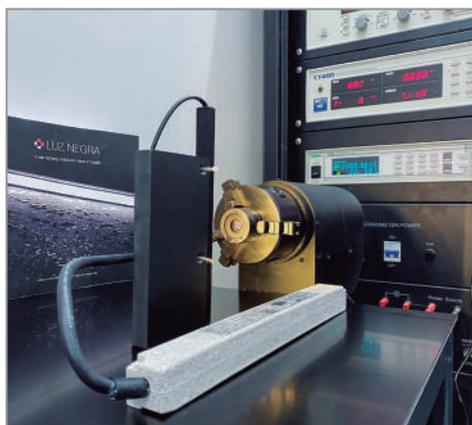

Temperature and humidity chamber:

This makes stress tests on the main components and led strips, taking them to the limit so we can work only with the best components.

Heat dissipation:

This measures the temperature to which the flexible strips and luminaires reach in order to limit consumption depending on the thermal dissipation of each profile.

High speed photometer:

This measures the flicker and the stroboscopic effect, ensuring all our products comply with the European EPREL regulation (European Product Database for Energy Labelling).

Resistance machine:

This evaluates the resistance of the welding and joints of the flexible strips, as well as the adhesion of the double-sided tapes.

Luz Negra designs and manufactures for linear lighting and under its own **ecoled** brand, high quality flexible strips with constant voltage.

We also commercialise led. modules from the German company Vossloh with high performance luminosity (greater than 190 lm/W) and with a 5-year warranty.

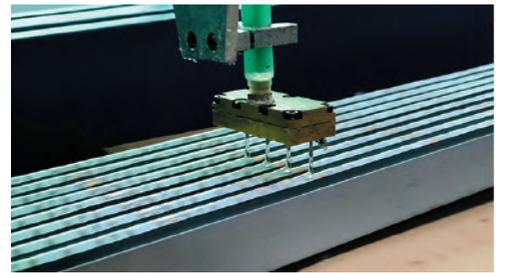

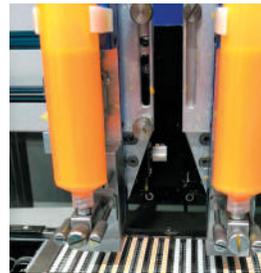

- ✓ + 80 models available in stock.
- ✓ Strips at 12V - 24V - 48V - 230V.
- ✓ 24V rigid strips with symmetrical and asymmetrical lenses.
- ✓ Tuneable white (CCT) and RGB flexible panels.
- ✓ Flexible strips RGB - RGB+W - tuneable white (CCT) - digital.
- ✓ COB flexible strips in 8 different models.
- ✓ Shades 1800K - 2100K - 2400K - 2700K - 3000K - 4000K - 5000K - 6000K.
- ✓ Strips with high CRI and Sunlike technology.
- ✓ Waterproof levels IP20 - IP44 - IP65 - IP67.
- ✓ Strips with die-cut PCB which can bend horizontally and vertically.
- ✓ Strips in rolls of 5.50 and 100 metres.
- ✓ Updated photometric studies of all models in our own laboratory.
- ✓ Web configurator that makes it easy to select the most suitable model.

Practical tips regarding led strips

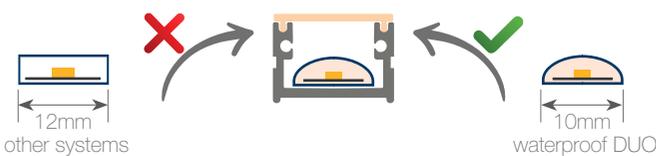

Complete list of our led strips

Waterproof DUO

Luz Negra has developed an exclusive sealing system called waterproof DUO that gives IP67 while maintaining the flexibility of the IP65 strips and without increasing their total width.

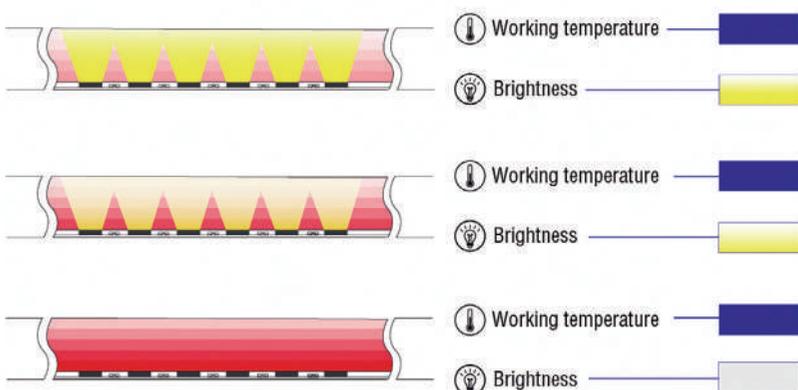

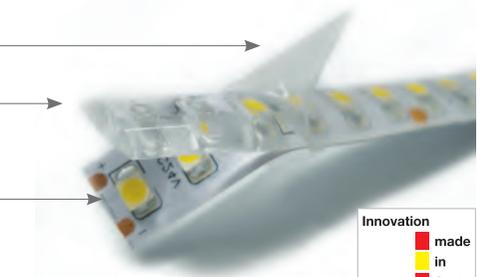

Luz Negra's waterproof DUO is the only water-tight system with IP67 which maintains a width of 10mm and its original flexibility.

"DUO" System which surrounds the led strip 360°

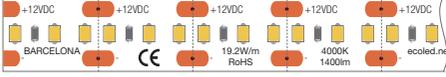

Silicone 180°

PCB with assembled leds

Heat Protection

Our Heat Protection System (installed in some of our models of led strips), allows you to stabilise the current by minimising the voltage drop (luminosity loss) and, in addition, means that the strip decreases its intensity until it turns off (if for some reason it overheats), meaning we can avoid deterioration.

Our Infinity and Ghost strips are by far the most professional 230V products on the market. It is essential that these strips, which work at 230V, have the best quality sealing to avoid any possible accidents, as they are installed directly to the current. Therefore, we fill the inside of our 230V strips with silicone, making the installation safer.

In addition, they have 140 leds per metre instead of 120 (necessary for correct homogeneous lighting in normal led profiles) and is the only strip on the market with CE - RoHS - LVD - EMC and even IK10 certificates. Its design, where we oversize the capacity of the chip allows it to work 24 hours without hardly heating up.

CE EMC certificate

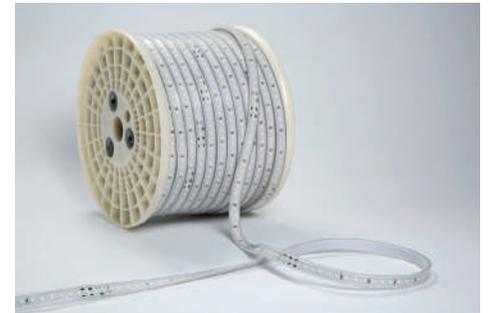

CE LVD certificate

RoHS certificate

IK10 certificate

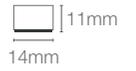

Infinity has a large number of connectors that can be screwed on, meaning we are not obliged to weld.

Scale 1:3 - Rigid led strip with asymmetric optic v.c.

Shinka Onelight

Luz Negra designs and manufactures profiles, such as the Shinka Onelight series, for luminous textile architecture with which we can make luminaires of up to 6x2m in one single piece. We recommend our rigid strips with symmetrical optics for this lighting option.

For more information about our Shinka range, you can scan the QR code.

Shinka models for light boxes with a textile front by Luz Negra.

Scale 1:3 - Led modules c.c.

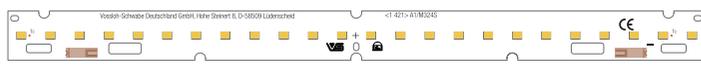

Constant current led modules for elevated luminosity and high performance linear luminaires. Designed in Germany and manufactured in the European Union, they have a 5-year warranty and a performance of up to 190 lumens/W. They can be fed from 150mA to 700mA and their measurements correspond to the Zaga standards of 140-280-560-1120mm (depending on the model). We have two models; premium that offers maximum luminosity and the ECO version that offers a highly competitive price.

Scale 1:7 - Flexible panels

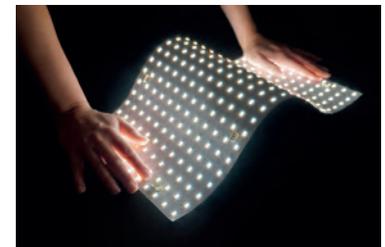

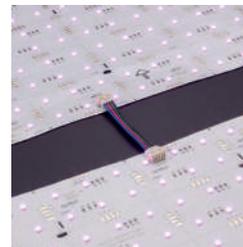

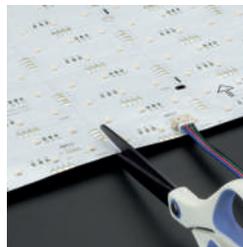

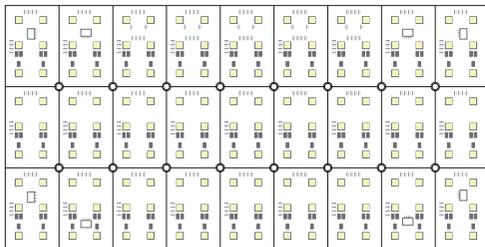

Flexible RGB or CCT panels for interiors. Especially suitable for backlighting in the form of luminaires and light boxes. It has the option of fast connectors to join together several panels without having to weld.

It can be cut along the established lines.

FLEXIBLE PANELS

Scale 1:2 - Ecoled power supplies IP67 v.c.

Constant voltage, IP67 power supplies (ecoled brand) by Luz Negra. Our brand offers the best option regarding quality/price. They work with a high power factor and comply with the regulations for luminaire power supplies. The interior is filled with resin, which guarantees use in both indoors and outdoors and also in damp areas.

Basic rules for the installation of power supplies

1. Study the voltage (V) and the wattage consumption (W) of the installation to be carried out, in order to be able to correctly choose the appropriate power supply.
2. Never place the power supply in closed boxes (allow to ventilate).
3. Depending on the type of installation we must install the power supply in the right place (to avoid sudden voltage drops). It is not advisable to place the source at a distance greater than 3 metres (maximum recommended) and if so, we must use thicker wiring.
4. All connections to be made must be fitted with the appropriate components (terminal strips).
5. To prevent overheating we recommend not overloading the power supplies in more than 85% of their theoretical maximum load (for example with a 100W source don't connect more than 85W). The same should apply to amplifiers, sequencers, dimmers and other accessories.
6. Whenever possible, we should apply the power supply to the material to spread the dissipation of the heat emitted (metal).
7. When installing in parallel, with several power supplies, it is important not to stack one on top of the other, as this can lead to malfunctions (heat condensation). The device must have sufficient space for air circulation (continuous air).
8. We must take special care when installing the power supplies, especially where there are risks of corrosion from external liquids, as well as places where there are high risks of fire and /or explosions.

Scale 1:3 - Vossloh power supply IP20 c.c.

Constant current, IP20 power supplies from the German company **Vossloh** with 5 years warranty. They work with a high power factor and comply with the regulations for luminaire power supplies. Models available with control Dali2 / 1-10V / Push.

They have special sizes so they can be inserted into the majority of our BIG PROFILE luminaires in our catalogue. They are used with the rigid led strips and light modules on page 36.

New batwing extra optics for parking lighting and similar.

Our new batwing extra optic, combined with our Munich Magnum profile means we only need one luminaire in the centre of the space to be illuminated. We can throw out light up to 15m on each side (30m in total).
